Product Description:

A new type of compound that uses micro-sized abrasives to create an excellent, showcar finish.

Most compounds use large, soft abrasives that cut, then breakdown into polish mode. (Like our Qwik Kut MV-250)

This product uses very hard, very small, abrasives that create an even cut for the entire buffing process. In comparison, it means that it doesn't have the fast initial cut of other compounds, but it continues to slowly cut and smooth out sanding scratches, oxidation and paint imperfections.

The advantage is that the product does not create swirls in the paint that have to be removed later with a Finishing product or Machine Glaze. You can create a perfect finish with this compound. No need for a second step.

It is also advantageous because you can use any type of buffing pad with this product. Wool for heavy duty cutting, foam for medium duty cutting.

Like all of our compounds, it doesn't stain, it isn't dusty and clean-up is a breeze.

Advantages:

- ◆ Consistent cutting formula
- ◆ Body Shop Safe
- ◆ Easy clean-up
- ◆ Utilizes hard, small abrasives
- ◆ Use on paint, fiberglass & gelcoat
- ◆ Works in all types of weather

Part Numbers:

- ◆ 32 oz. # 22-813
- ◆ 1 gallon bottle # 22-814

Directions:

By Machine:

1. Surface should be clean and cool to the touch
2. Set polisher to 1200 - 2000 rpm with a wool or foam pad depending on cut you desire.
3. Apply a small amount of product to paint and spread over a 2' x 2' area. Try to keep pad flat at all times.
4. Buff evenly, using overlapping motions, until product is almost all gone.
5. Remove residue with a microfiber towel. Continue to next section.
